

DIRECTOR OF CENTRAL INTELLIGENCE
Security Committee
RESEARCH AND DEVELOPMENT SUBCOMMITTEE

8 APR 1977

MEMORANDUM FOR: Chairman, Security Committee

SUBJECT : National Technical Threat Estimates 1976-1981

1. Attached for your retention and use is the report, National Technical Threat Estimates 1976-1981. This report is intended to provide a concise technical estimate as to technically practical audio and video surveillance devices. The technical characteristics described are expected to be representative of the majority (90 percent) of the devices that may be encountered. Estimates are made for devices based on present technology. Projections of likely technical developments over the next five years are included. It is hoped that these estimates will be of value both to those responsible for the management of the security program and to the technical specialists who conduct security inspections and surveys.

2. Other on-going studies will relate these technical threats to specific intelligence service capabilities insofar as they are known. Additional copies of this report are available upon request through each member agency's representative on the Research and Development Subcommittee or from the Executive Secretary, Research and Development Subcommittee.

3. It is recommended that this report be forwarded to the NFIB for noting.

Philip K. Eckman
